

Terralink Data eXchange TDX™

□ **On the Desktop**

Terralink, the first company to deliver a Windows™ based solution for hazardous waste information management, introduces their newest and most complete solution ever, ***Terralink Data eXchange*** or ***TDX™***. ***TDX*** is a platform that provides the basis for managing all your hazardous waste information needs, and is also a solution that gives you maximum flexibility for communications and growth – including Internet options.

□ **On the Internet**

The core design of ***TDX*** employs a Windows Explorer™ look and feel interface. This, coupled with our unique integration of regulatory and chemical constituent information with your specific data, facilitates easy access to all of your waste information.

□ **Custom Profiles**

Whether you are a generator or service organization, let ***TDX*** manage profiles and manifests. The "2-Minute Manifest" test will confirm how easy it is to create and simultaneously print state-specific manifest forms, continuation sheets, supporting LDR's, and labels.

□ **2 Minute Manifest**

The power of ***TDX Inventory*** provides hazardous waste constituent management from generation until final disposition. Coupled with Terralink's powerful ***Select™*** and ***Second Click™***, you can look backward or forward in time to analyze all of your inventory transactions.

□ **Inventory Tracking**

We haven't stopped there. Terralink has developed ***TAXI™***, an XML based language to enable the communication of your important information across the room, across town or across the country. With the click of a mouse updated profiles can be shared with your remote locations or business partners. Manifests can be sent electronically. Reports can be submitted to regulatory agencies.

□ **Select™**

□ **Second Click™**

Add hundreds of ***Reports***, like specific facility profiles, state-specific manifests, state reports or the Federal Biennial - or let us tailor one for you. Rest assured that all of your reporting needs are now under control – yours.

□ **TAXI™**

Add an ***Internet*** option and you will now have the best of all worlds – on your desktop, on the Internet, or both. You have choices. We have answers. Go Further with Terralink.

□ **Custom Reports**
